Objective

Motivated FullStack web developer with an eye for lovely UI/UX and a passion for PHP. With experience in freelancing of websites and web apps from freelance opportunities my passion has only grown wider.

Education

FullStack Web Development

- NIIT, D-LINE, Port-harcourt

B.Sc in Human Physiology

- Rivers State University

Skills

Programming Languages:

- JavaScript, PHP

Frameworks/Libraries:

- Vue.js, TailwindCSS, Bootstrap, jQuery, AOS

Databases:

- MySQL

Developer Tools:

- Git/GitHub, VS Code

Achievements

• Team Lead at NIIT Project Group, where we developed **Bitbet**, a casino-style JavaScript game integrating dynamic UI and basic game logic.

Work Experience

1. **Keep Seats — SaaS Ticketing Platform (Contract job)**
   • Developing a SaaS platform that enables users to seamlessly purchase event tickets across the country.
   • Architected with pure PHP, dynamically rendering the frontend and performing backend operations without external frameworks.
   • Integrated MySQL for data persistence and Paystack API for secure payment processing.
   • Implemented PHPMailer for OTP verification and automated client communications.
   • Designed a fully responsive, modern interface using Tailwind CSS utility classes.

2. **Company Website for Ebievik Global Resources(Contract job)**
   - Developing a website to properly advertise the brand
   - Maximizing reach with proper SEO techniques
   - Implemented PHPMailer for automatic mails
   - Designed a fully responsive, modern interface using Tailwind CSS utility classes.
   - Implemented framer motion and other light weight JavaScript libraries to animate on scroll

Personal projects

1. **Bitbet — Casino-Style Web Game** *(Personal Project)*
   • Developed the frontend of a casino-themed betting game using HTML, CSS, and JavaScript.
   • Designed a responsive, interactive UI featuring multiple game screens and dynamic animations.
   • Implemented smooth state transitions and real-time feedback through DOM manipulation and modular JavaScript logic.
   • Later began rebuilding the project with Vue.js to improve scalability and component structure, but paused development to focus on contracts I acquired.
