PROFESSIONAL SUMMARY

Backend Engineer specializing in Node.js (TypeScript/Express.js), Java (Spring Boot), and high-throughput transactional architectures. Experienced in building scalable digital wallet infrastructure, web3/crypto ledger integrations, asynchronous event-driven microservices, and payment platforms. Proven track record in database schema design, atomic transactions, and secure RESTful API development.

TECHNICAL SKILLS

- **Languages:** Node.js, TypeScript, JavaScript (ES6+), Java, PHP, SQL
- **Frameworks:** Express.js, Nest.js, Spring Boot, Laravel
- **Databases:** PostgreSQL, MySQL
- **Infrastructure & Tools:** Docker, Docker Compose, RabbitMQ, CI/CD, Git, RESTful APIs, JWT, OAuth2
- **Core Concepts:** Wallet/Ledger Systems, Cryptographic Webhooks, Idempotency, Atomic Transactions, Pessimistic Locking

ENGINEERING EXPERIENCE

Digital Assets & Financial Infrastructure Platform <i>Backend Infrastructure Consultant (Contract)</i> Node.js, TypeScript, PostgreSQL, WebSockets, Docker	Remote 2026 – Present
• Engineered resilient backend services for real-time digital asset processing, transaction ledger reconciliations, and wallet operations. • Implemented atomic database transactions and strict idempotency controls across transactional endpoints to prevent duplicate payments and race conditions under heavy load. • Integrated external crypto exchange APIs, webhooks, and third-party payment infrastructure with automated retry and fallback mechanisms. • Optimized database schema designs and query performance in PostgreSQL to support high-throughput financial transactions.	
FujiCommerce <i>Lead Backend Engineer</i> PHP, PostgreSQL, Paystack, Termii	Startup 2025 – 2026
• Built multi-vendor marketplace infrastructure supporting seller onboarding, product management with JSONB attribute storage, and multi-seller order splitting. • Engineered a Paystack-integrated checkout with atomic SQL stock locking to prevent overselling under concurrent purchase requests. • Implemented a seller disbursement ledger with withdrawal workflows, balance tracking in minor units (kobo), and automated low-stock alerts via scheduled cron jobs. • Developed a Termii-powered transactional communication layer with standardized templates and event mapping.	
Keep Seats SaaS Ticketing Engine 2024 – 2025 — PHP, MySQL (Kiscontent Digital Agency Contract)	Backend Developer
• Engineered real-time seat allocation logic with transactional atomicity to eliminate overbooking under peak concurrent traffic. • Built OTP-based verification flows and secure payment integrations for customer ticket acquisition.	

EDUCATION & CERTIFICATIONS

- **Rivers State University:** Bachelor of Science
- **NIIT:** Diploma in Full Stack Web Development
