PROFESSIONAL SUMMARY

Dedicated **Backend Developer** with specialized expertise in building scalable server-side architectures using **Java (Spring Boot)** and **PHP (Laravel)**. Proven experience in architecting e-commerce and fintech SaaS infrastructure, designing optimized relational database schemas (PostgreSQL, MySQL), and integrating third-party APIs for secure payments and automated communications.

TECHNICAL SKILLS

Languages: Java, PHP, Go (Golang), SQL, JavaScript
Frameworks: Spring Boot, Laravel
Databases: PostgreSQL, MySQL (Relational Schema Design, Query Optimization)
Tools/API: Termii API, Paystack API, Git, Docker, Postman

BACKEND ENGINEERING EXPERIENCE

FujiCommerce [2025] – Present
Lead Backend Developer Personal Venture

- Architecting the backend infrastructure for a multi-seller e-commerce platform using PHP.
- Integrated the **Termii API** to handle automated server-side email communications and user notifications.
- Designing and managing **PostgreSQL** relational schemas to ensure data integrity for complex product and store listings.
- Implementing secure RESTful endpoints for merchant verification and automated payment processing via Paystack.

Keep Seats [2025]
Backend Developer Contract/Remote

- Developed a custom SaaS ticketing backend using pure PHP to ensure high performance and low latency.
- Engineered logic for real-time transactional integrity and secure seat allocation using **MySQL**.
- Integrated Paystack for seamless payment flows and implemented custom server-side validation logic.

Ebievik Global Resources [2024]
Web Developer (Backend-Focused) Contract

- Engineered automated client inquiry systems.
- Optimized site performance by refactoring backend logic.

BACKEND PROJECTS

SpringKit GitHub
Java, Spring Boot

- Developed a modular toolkit for **Spring Boot** applications, implementing reusable security configurations and standardized API response wrappers.
- Focused on clean architecture principles to accelerate the deployment of Java-based microservices.

Go REST API *Go (Golang), PostgreSQL*

- Built a performant REST API using Go's standard library to practice efficient routing and JSON processing.
- Integrated PostgreSQL for data persistence, focusing on manual schema management and SQL optimization.

Mortgage Logic Engine GitHub
Java

- Engineered a robust mathematical engine for loan calculations, focusing on algorithmic accuracy and modular design.

EDUCATION & CERTIFICATIONS

Laravel & PHP Mastery Practical Training
NIIT Diploma in Full Stack Web Development
Rivers State University Bachelor of Science
